Opportunity to deploy FTTH using the reuse approach - faster and cheaper - with evaluation of partnership models to accelerate fiber deployment.

Potential additional HPs:
- Existing layer
- Layer to be built

Potential to explore partnership models in attractive areas with lower infra readiness.

~32m total viable HP’s with unrestricted CAPEX.

Oi plans to deploy ~15m homes passed between 2019-2021.

Accelerated deployment expected to enable 4.6m homes passed by YE 2019 and 16m homes passed by YE 2021 – ~66% higher than initially announced.

Potential to double total HPs with additional funding, partnerships and joint investments.

Deployment strategy expected to be developed in three tiers, depending on regional competitive context:
- Direct competition through investments
- Partnerships to accelerate deployment
- Enablement of smaller cities with transport infrastructure and additional services

Execution on track to upgrade YE 2019 HP target from 3.7m to 4.6m

1. TX=Transmission  2. SE=Single Edge  3. OLT=Optical Line Terminal  4. SN=Secondary NW;  5. Positive NPV considering discount rate @12%

Business transformation, investments and operational simplification driving expected EBITDA growth to 15-20% CAGR until YE 2021

Improving EBITDA expected to be driven by fiber investments, mobile strategy, wholesale growth and cost reduction

Room for further improvement through structural transformation

Significant increase from 4.5-5.0 expected in 2019, where there is EBITDA pressure due to:

- Increasing commercial efforts due to strong traction seen in fiber and mobile
- FX headwinds (Real depreciation) on foreign currency costs
- Downward trends in copper revenues (to be offset by fiber by 2021)

Oi is committed to improving financial performance and delivering sustainable results
